**Investment Philosophy and Process**

**AIM International Growth Fund**

**EQV: Bottom-up Investment Process**

- **International Equity Universe**
  - Market cap of more than $2 billion (developed and emerging stocks)

- **Step 1: Idea Generation**
  - Qualitative/quantitative analysis
  - Focus on earnings, quality, valuation

- **Step 2: Fundamental Research**
  - In-depth/bottom up

- **Step 3: Portfolio Construction**
  - 80-100 holdings

**Risk Management and Sell Discipline**

**EQV: Investment philosophy**

Our investment philosophy is based upon the following core beliefs:

- **Stock selection.** Portfolio construction is driven by a bottom-up approach.
- **Active management.** The portfolio is managed with generally low benchmark index overlap.
- **Long-term horizon.** Stocks are generally purchased with a two- to three-year investment horizon.
- **Earnings (E).** Earnings growth drives stock prices in the long run, and investors underreact to positive earnings news.
- **Quality (Q).** Companies with efficient capital allocation create long-term value.
- **Valuation (V).** Companies with underappreciated growth prospects provide relatively attractive risk-reward opportunities.

**Universe definition**

Our universe is made up of about 6,000 international companies, including both developed market and emerging market stocks. For active research consideration and potential portfolio inclusion, a security should typically have a market capitalization of at least $2 billion. Liquidity is important in international investing; therefore, we typically invest in companies in which fund positions can be traded in fewer than eight days.

**Security selection**

**Step 1 - Idea generation:**

New ideas are identified (and researched on an ongoing basis) using numerous qualitative and quantitative sources.

**Qualitative idea generation**

We spend a significant amount of time on global research-based travel. The team jointly travels more than nine months each year for research purposes and meets with more than 500 company management teams. We also leverage global and local sell-side analysts and other third party research services to better understand company and industry dynamics.

**Quantitative idea generation**

We leverage technology by using quantitative screens as “another tool in our tool box” to help identify potential new ideas and monitor existing holdings. These screens focus on measuring and ranking several key criteria that are central to our earnings, quality and valuation (EQV) investment process.

**Step 2 – Fundamental research:**

In-depth fundamental research is the cornerstone of our investment process. In this step, we focus on building a deeper understanding of the EQV profile of each investment opportunity identified in Step 1 (Idea generation).

**Earnings (E)**

We seek companies with earnings growth catalysts and improving earnings news. We then thoroughly analyze the fundamental drivers of the positive trends (e.g. revenue growth, cost savings, new products, etc).

**Quality (Q)**

We analyze the likely sustainability of these earnings growth trends. For example, we like companies with strong balance sheets and proven management teams that have allocated capital in efficient and profitable ways.
Portfolio Construction
- 80 to 100 holdings
- Position size typically 0.75%-3%
- Maximum position size less than 5%
- Top 10 holdings typically 15%-30%
- Emerging markets limited to less than 20%
- Cash generally kept to less than 10%
- Currencies unhedged

Valuation (V)
We analyze numerous valuation metrics in order to identify those stocks that appear to have underappreciated growth prospects. We focus on not overpaying for growth by avoiding expensive “glamour” stocks.

Step 3 - Portfolio construction:
A stock that successfully passes our rigorous EQV-driven idea generation and fundamental research process is a viable candidate for inclusion in the portfolio.

The key portfolio construction objective is to establish a portfolio of 80 to 100 stocks that is broadly and prudently diversified across large/mid-caps, sectors, countries, regions and developed and emerging markets. A focus on actively managed, bottom-up stock selection drives sector and country allocations and the resultant portfolio does not seek to mimic the benchmark index.

Risk management
The portfolio construction process also reflects several risk management techniques used to monitor and control risk within the fund, including:
- Broadly diversified portfolio.
- Stock selection that focuses on identifying companies with attractive quality and valuation characteristics.
- Maintaining stock liquidity criteria.
- Use of forensic accounting criteria.
- Performance and risk attribution analysis.
- Portfolio oversight.

Sell discipline
We believe that a key determinant of successful growth investing is the sell decision. We employ a rigorous sell discipline, again based on the EQV profile of a company. Stocks are sold due to:
- Earnings (E). Deteriorating earnings growth, disappointing earnings revisions or surprises due to poor fundamentals.
- Quality (Q). Deteriorating company/industry fundamentals, reduced competitive outlook and accounting errors.
- Valuation (V). Excess valuation.

We may also sell if:
- A more attractive opportunity is identified.
- Risk considerations emerge (e.g. a position becomes too large).

A word about risk
Investing in developing countries can add additional risk, such as high rates of inflation or sharply devalued currencies against the U.S. dollar. Transaction costs are often higher, and there may be delays in settlement procedures.

Prices of equity securities change in response to many factors, including the historical and prospective earnings of the issuer, the value of its assets, general economic conditions, interest rates, investor perceptions and market liquidity.

Foreign securities have additional risks, including exchange rate changes, political and economic upheaval, relative lack of information, relatively low market liquidity, and the potential lack of strict financial and accounting controls and standards.
